VOLTMETERS/PHASING SETS
For Phase-To-Phase & Phase-To-Ground Measurements

DESCRIPTION

Our extensive line of voltmeters and phasing sets are designed to measure AC and DC voltages on conductors from phase-to-ground and phase-to-phase. These instruments also allow the user to determine if two conductors are in-phase or out-of-phase with one another. There are numerous models available with different ranges to assure the best possible range for easy readings. All models are designed for use on overhead lines and are adaptable for use on underground systems by using accessory probes.

Our analog line of voltmeters and phasing sets include the MARK and EM series. Our digital line of voltmeters and phasing sets include the DigiVolt series. All of the voltmeters and phasing sets feature universal splines for mounting onto hotsticks and large easy-to-read displays.

BENEFITS

- Measure voltages from phase-to-ground and phase-to-phase up to 80kV
- Determine if two conductors are in-phase or out-of-phase
- Measure voltages and phase conductors on both overhead and underground systems
- Verify a conductor is de-energized prior to grounding
- Measure voltages in Metal Enclosed Switch Gear
- Determine whether a section of URD cable is faulted with the Cable Fault Tester (optional accessory)
- Discharge underground cables and other equipment that hold capacitive charges
Voltmeters and Phasing Sets
For Phase-To-Phase and Phase-To-Ground Measurements

**MARK & EM ANALOG FEATURES**

There are three models of the EM series voltmeters and eleven models of the MARK series voltmeters and phasing sets. The EM series are all single stick voltmeters with one resistive probe with universal spline and ground lead, for phase-to-ground measurements only. The MARK series are all dual stick phasing voltmeters with connecting cord and universal spline for phase-to-phase and phase-to-ground measurements.

- Coil cord is standard on all MARK and EM series products. Coil cord is rated at 10kV. Length is 2' (0.6m) retracted and 9' (2.8m) fully extended. Optional lengths are available. Optional reel with straight cord available at no additional cost in lengths up to 22' (6.7m). Straight cord is rated at 15kV.
- Accuracy 3% of full scale
- Universal splines
- Rugged construction designed for heavy field use
- Overhead brass hook contact probes
- Large 3" (7.6 cm) meter face with a Lexan protective cover is specially designed for easy reading and increased accuracy. Multiple scales assist the user in avoiding misreads.
- Strain relief fittings at ends of cords reduce cable damage at point of highest stress
- All fiberglass is quality tested to ASTM F-711 and OSHA standards (100kV/foot for 5 minutes)
- High voltage resistors are encapsulated in epoxy in all resistor sticks, thereby limiting maximum current to approximately 1 millamp at full rated voltage.
- Virtually maintenance free - no batteries required
