## NEW! Refrigeration System Analyzer with Vacuum Gauge

The testo 557 four valve manifold with a built in vacuum gauge is the next high performance, low cost Refrigeration System Analyzer from testo. The built in vacuum gauge allows the technician to know when they have reached the limits when evacuating a system. Building upon the easy to use platform designed by testo, the 557 has 2 NTC temperature probe inputs and can simultaneously calculate superheat and subcooling in real time. The 557 is ideal for servicing, maintaining and commissioning all types of air conditioning systems. The 557 will also perform leak tests on $\mathrm{AC} / \mathrm{R}$ systems with temperature compensation, insuring accurate results. The testo 557 retains the robust housing that protects the analyzer from the everyday bumps and drops. It comes complete with 2 clamp probes, integrated hook, built in hose holders and a hard carrying case.

## Features

- Built in Vacuum Gauge
- Robust valve block with 4 connections and built in sight glass
- 2 temperature probe inputs for simultaneous real-time calculation of superheat and subcooling
- Readings are displayed within seconds
- Compact design for ease of use, transport and setup
- Large easy to read back-lit display
- Robust housing that protects the analyzer
- 40 Refrigerants stored eliminating the use of PT charts
