

34902A 16 Channel Multiplexer (2/4-wire) Module

The Agilent 34902A module for the 34970A Data Acquisition/Switch Unit employs reed relays to achieve scan rates up to 250 channels-per-second. Use this module for high-throughput automated test applications as well as high-speed data logging and monitoring tasks.

Sixteen two-wire inputs switch up to 300 V. Two- and four-wire channels may be mixed on the same module. User provided shunt resistors are required for current measurements.

Key Features and Specifications

- 16 Channel Multiplexer
- 250 ch/s scanning
- Two- and four-wire scanning
- Built-in thermocouple reference junction
